

Create a Terraform Cloud account and explore how state files and remote execution work.

1.Create account in terraform cloud

2.Create an organization

3.important part – backend config

Config the terraform cloud

Note: You didn't use the `-out` option to save this plan, so Terraform can't guarantee to take exactly these actions if you run "terraform apply" now.

```
(base) matifi@Mac teraa-modules % terraform login
```

Terraform will request an API token for `app.terraform.io` using your browser.

If login is successful, Terraform will store the token in plain text in the following file for use by subsequent commands:

```
/Users/matifi/.terraform.d/credentials.tfrc.json
```

Do you want to proceed?

Only 'yes' will be accepted to confirm.

Enter a value: yes

Terraform must now open a web browser to the tokens page for `app.terraform.io`.

If a browser does not open this automatically, open the following URL to proceed:

```
https://app.terraform.io/app/settings/tokens?source=terraform-login
```

Generate a token using your browser, and copy-paste it into this prompt.

Terraform will store the token in plain text in the following file for use by subsequent commands:

```
/Users/matifi/.terraform.d/credentials.tfrc.json
```

Token for `app.terraform.io`:

Enter a value:

Retrieved token for user **danuja**

Welcome to HCP Terraform!

Documentation: [terraform.io/docs/cloud](https://www.terraform.io/docs/cloud)

New to HCP Terraform? Follow these steps to instantly apply an example configuration:

```
$ git clone https://github.com/hashicorp/tfc-getting-started.git
```

verify aws-lab → States **tab**

Apply changes

```
}

# module.vpc.aws_vpc.my_vpc will be created
+ resource "aws_vpc" "my_vpc" {
  + arn                                = (known after apply)
  + cidr_block                        = "10.0.0.0/16"
  + default_network_acl_id           = (known after apply)

  + tags                              = {
    + "Name" = "my_vpc"
  }
  + tags_all                          = {
    + "Name" = "my_vpc"
  }
}
```

Plan: 3 to add, 0 to change, 0 to destroy.

Do you want to perform these actions in workspace "aws-lab"?

Terraform will perform the actions described above.

Only 'yes' will be accepted to approve.

Enter a value: yes

module.vpc.aws_vpc.my_vpc: Creating...

module.vpc.aws_vpc.my_vpc: Creation complete after 2s [id=vpc-012ee5d2f52958cb4]

module.vpc.aws_subnet.private_subnet: Creating...

module.vpc.aws_subnet.public_subnet: Creating...

module.vpc.aws_subnet.public_subnet: Creation complete after 1s [id=subnet-000f88fc82c844538]

module.vpc.aws_subnet.private_subnet: Creation complete after 1s [id=subnet-0e839442678bf7c6b]

Apply complete! Resources: 3 added, 0 changed, 0 destroyed.
